## DETAILED ACTION

### ***Allowable Subject Matter***

1. **Claims 1-8** are allowed.

**Claim 1** is allowed because the closest prior art, Seaman et al. (Pub No. US 2002/0009092), and Portolani et al. (U.S. Patent 7,061,875), either singularly or in combination, fail to anticipate or render obvious a method comprising: allotting predetermined vertex information to each vertex on the spanning tree; detecting all circuits having a plurality of communication paths among the connection devices over the network corresponding to the spanning tree; and applying rapid ring spanning tree protocol (RRSTP) to links corresponding to the detected circuits and applying rapid spanning tree protocol (RSTP) to links not corresponding to the detected circuits, in combination with all other limitations in the claim as claimed and defined by applicants.

**Claims 2-6** are allowed as dependent from claim 1.

**Claim 7** is allowed for the same reason explained above since it is the corresponding apparatus claim of method claim 1.

**Claim 8** is allowed for the same reason explained above since it is the corresponding computer-readable medium claim of method claim 1.
